## Docket No.: A-7041

| ABSTRACT  |
|---|
| An embodiment of the present invention provides a system and method for adaptive resource             |
| access priority allocation. A method for adaptive resource access priority allocation includes        |
| determining whether a resource constrained mode is to be initiated, and responsive to a determination |
| that the resource constrained mode is to be initiated, initiating the resource constrained mode,      |
| including modifying a resource access priority. For example, adaptive resource access priority        |
| allocation may include increasing the priority for graphical data transfer during intervals of high   |
| demand for memory and/or bus bandwidth resources.   |
